

DOCUMENT CLASSIFICATION: TOP SECRET // EYES ONLY – SOCIETAL LEADERSHIP COUNCIL **SUBJECT:** Post-Interdiction Threat Assessment: Proliferation and Neurological Compromise of Temporal Duplicates **PREPARED BY:** The Directorate for Temporal Anomalies and Societal Integration **DATE:** [REDACTED]

Executive Summary

Following the absolute interdiction of all chronological circumvention, our reality is currently stabilizing from an estimated 100,000-year epoch of unregulated temporal branching. The dominant physical consequence of this era is the uncountable proliferation of parallel universe instances, generated whenever mass or data traversed backward along the timeline. While the cessation of temporal warfare has stabilized the macro-structure of reality, a critical micro-societal crisis has emerged. The heroic entities responsible for stabilizing the timeline during the conflict have been duplicated on an unquantifiable scale. Concurrently, these populations were subjected to intense psychological trauma and weaponized neurological editing by hostile factions. We are now managing an unprecedented population of highly capable, combat-trained duplicates who possess fractured, altered, or maliciously rewritten memories.

Detailed Description of the Situation

The mechanics of the temporal wars relied on the Many-Worlds interpretation of chronological manipulation. Every incursion into the past—whether a localized troop deployment or a micro-transmission of data—shattered the frozen space-time continuum, spawning a divergent universal branch. Over a sustained period, this resulted in an exponential, fractal expansion of reality.

The individuals most frequently deployed into these fracture points were our highest-performing strategic and combat assets. Consequently, these "heroes" represent the most heavily duplicated demographic in the post-interdiction aggregate population.

During the conflict, adversarial forces recognized the impossibility of physical eradication across infinite branches. Their strategic pivot focused on psychological and neurological sabotage. Hostile actors utilized advanced cerebral editing technologies to alter the memories, loyalties, and behavioral inhibitors of these key figures.

The current landscape features uncountably large numbers of these formerly heroic assets suffering from the following conditions:

- **Extreme Psychological Fragmentation:** Severe PTSD compounded by conflicting memories overlapping from parallel temporal branches.
- **Malicious Criminal Rewriting:** Individuals neurologically reprogrammed by enemy combatants to possess criminal compulsions, sociopathic tendencies, or sleeper-agent sabotage protocols.
- **Identity Dissociation:** The existential collapse resulting from encountering millions of identical selves, many of whom possess vastly different fabricated or genuine moral alignments.

Neurological Alteration Profiles

To assist leadership in categorizing the incoming populations, the Directorate has identified three primary profiles of altered duplicates:

Profile Classification	Description	Threat Level
Type Alpha (Traumatized)	Retains original moral baseline but suffers from debilitating, unedited war trauma.	Low to Moderate
Type Beta (Subverted)	Memories heavily edited by hostile forces; genuinely believes themselves to be enemy combatants or sympathetic to hostile ideologies.	High
Type Gamma (Criminalized)	Neurologically stripped of ethical inhibitors; implanted with artificial memories of criminal behavior to sow chaos in allied settlements.	Extreme

Logical Consequences of the Proliferation

The unmanaged integration of these populations presents severe, cascading risks to societal stability. Researchers have compiled the following logical consequences arising from the current demographic reality:

- **Erosion of the Justice System:** Traditional punitive measures are ineffective and ethically compromised when a perpetrator's criminal impulses were artificially manufactured by state enemies.
- **Resource Depletion:** The logistical burden of housing, feeding, and medically treating an uncountably large population of identical individuals threatens to collapse the planetary supply chain.
- **Paranoia and Trust Deficits:** The inability to distinguish a "genuine" heroic asset from a maliciously edited Type Gamma duplicate destroys trust within military and civilian leadership ranks.
- **Factionalization:** Duplicates are organizing into insular, hyper-competent sub-societies based on shared memory profiles, creating a parallel, potentially adversarial, power structure.

Strategic Recommendations

To mitigate the existential threat posed by the post-interdiction population crisis, the Directorate recommends the immediate implementation of the following protocols:

- **Establishment of Cognitive Triage Centers:** Deploy mass-scale neurological scanning facilities at all population integration points to detect artificial memory engrams and categorize individuals by Profile (Alpha, Beta, Gamma).
- **Suspension of Traditional Criminal Statutes:** Reclassify all offenses committed by Type Gamma and Type Beta individuals as acts of temporal warfare rather than civilian crimes, shifting jurisdiction from law enforcement to military medical rehabilitation.
- **Development of Memory-Sanitization Infrastructure:** Fast-track the funding and deployment of benign neuro-editing technologies capable of isolating and neutralizing weaponized enemy engrams without destroying the host's underlying cognitive function.
- **Implementation of the "Anchor" Protocol:** Assign each verified, neurologically intact

duplicate a unique, cryptographically secure digital identifier to prevent identity theft and infiltration by subverted assets.

- **Geographic Decentralization:** Mandate the dispersal of duplicate populations across varying sectors to prevent the formation of localized, hyper-capable insurgencies.
